ANNOUNCEMENT · GREEKCERT PROJECT

Pagkalos Nurseries selected for the GreekCert project

It is with great joy and pride that we announce to olive growers and our partners that, on the initiative of the Institute of Olive Tree, Subtropical Plants and Viticulture, the **GreekCert** project has been launched. Its aim is the production of **certified propagation material** for olive, citrus and fig.

The project brings together leading research centres:

- Institute of Olive Tree, Subtropical Plants and Viticulture — ELGO-DIMITRA (Chania)
- Benaki Phytopathological Institute
- Agricultural University of Athens (AUA)
- Italian Institute for Sustainable Plant Protection (CNR-IPSP) — an international reference point for *Xylella fastidiosa*

> Pagkalos Nurseries were selected from all over Greece to produce pre-basic, basic and certified propagation material for olive and citrus.

This is the highest honour for us and a recognition of our many years of effort. With the contribution of these specialised research centres, high-specification olive and citrus saplings are made available to the market, ensuring:

TRACEABILITY	VARIETAL AUTHENTICITY	PLANT HEALTH	HIGH PRODUCTIVITY

Koroneiki saplings at our nursery in Heraklion

Each plant carries its official plant passport

Our nursery also offers dwarf olive varieties for super-high-density plantings, allowing full mechanisation of the harvest on suitable soils.

Pagkalos Nurseries — beside the grower since 1974
